

# FUEL TROLLEYS

Wherever you have equipment with a petrol or diesel motor, you've the problem of getting the fuel out to it. The nearest filling station may be miles away and, with the continuing closure of many rural fuel pumps especially, they are often getting even further away. If you need more than the odd canister or jerrycan of fuel, you have a major logistical and safety issue on your hands. The new Fuel Trolley is the ideal solution.

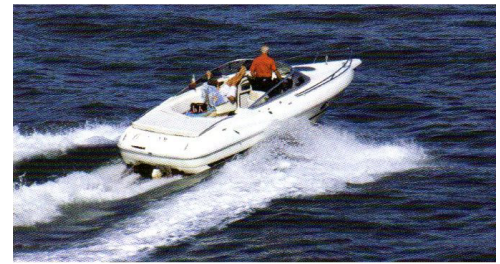

## **Golf & sport amenity management**

Mowers & cutters are often used all day and they need fuel. Fill up quickly, cleanly and safely without needing to go back to a stationary fill point. Save time and fuel.

## **Microlight Aviation**

A fuel trolley will provide you with enough fuel on site for a couple of flights, again saving you time and effort.

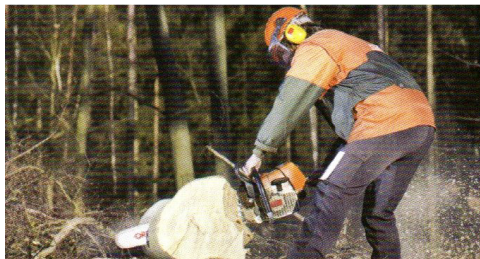

## **Water sport and boating.**

Docks, quays & towpaths are not always in the most convenient places. Steps and long pathways down to the water can make refuelling with canisters a real chore. Put the leisure back into your hobby and save time.

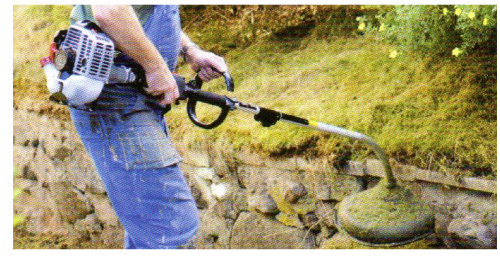

## **Motor sport**

Need to get fuel out to the trackside quickly and safely? The Fuel Trolley is a winning solution, ideal for karts and other racing vehicles.

## **Forestry**

Large 30cm wheels with pneumatic tyres mean that the Fuel Trolley can be taken almost anywhere. If you've a major project on the go, you can take out enough fuel to keep going. We even have a foldable tray you can use to catch even the last stray drip.

## **Landscaping & gardening**

Limited access? Can't follow your operators around in a van? Wheel out your fuel and take it to where your mowers, cutters and other equipment are already working and save time and effort.

# FUEL TROLLEYS

With the Fuel Trolley for petrol or diesel, you can bid farewell to the hassles of moving & dispensing smaller amounts of fuel or refuelling in out-of-the-way locations. What you do not lose is the high quality. You can now transport up to 100L of fuel to site safely, securely & efficiently.

Moulded recesses for strapping

Integrated breather valve

Pump isolation valve

Pneumatic tyres

Nozzle holder and lock

Compact hose reel

NB. UK law still limits the domestic storage of petrol in plastic containers to 5L. The Fuel Trolley is not intended for domestic use or storage. Professional users of petrol may use any suitable container but must have an appropriate risk assessment in place according to DSEAR. Road transport by professional users is permitted under the limited exemption accorded by 1.1.3.1c ADR.

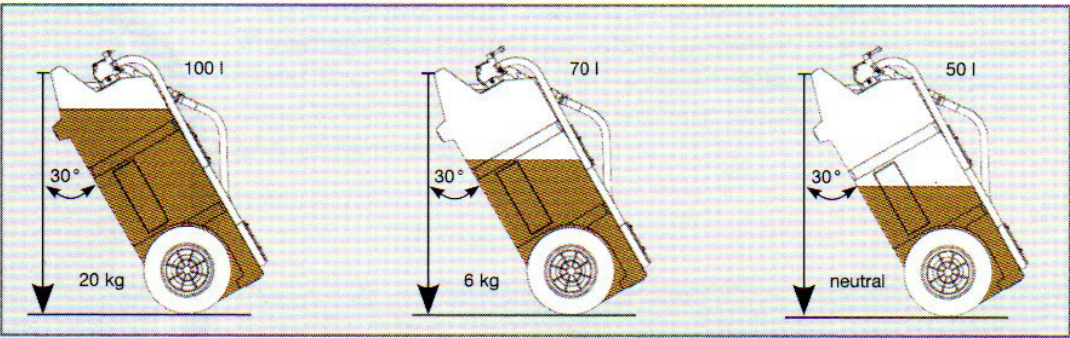

# FUEL TROLLEYS

## Diesel Trolleys

- High density polyethylene tank with integral hand grip and carrying handles
- Filling cap with integral breather valve
- Pump isolation valve
- 30cm Ø wheels with pneumatic tyres
- Interior baffle
- Integral nozzle holder and lock
- Moulded recesses for ratchet straps to secure unit during transport

### Fitted pump options:

- Hand pump 25L/min with 3m hose and manual nozzle
- Self-priming 12v electric pump 25L./min with 4m fly leads, 3m hose and automatic nozzle

Weight distribution to hand grip during movement

Description	Dimension L x W x H	Capacity	Weight	Type
Diesel Trolley 100 HP	1000 x 590 x 430mm	100L	19kg	7282w
Diesel Trolley 100 12v	1000 x 590 x 430mm	100L	20kg	7283w

## Petrol Trolley

- Tank constructed from electrically conductive polymer to remove static.
- Tank filled with a patented flame suppression material to remove explosion risk.
- Earth cable with clip
- Integral hand grip and carrying handles
- Filling cap with integral breather valve
- Pump isolation valve
- Fitted with 25L/min hand pump, 3m conductive fuel hose and nozzle
- 30cm Ø wheels with pneumatic tyres
- Interior baffle
- Integral nozzle holder and lock
- Moulded recesses for ratchet straps to secure unit during transport

Description	Dimension L x W x H	Capacity	Weight	Type/Ref
Petrol Trolley	1000 x 590 x 430mm	95L	20kg	7284w
